MONITORING SYSTEM USER ACCEPTANCE TESTING
PURPOSE

INITIATION & DISCOVERY

Define the scope of the project and timeline. Build and approve the project plan and schedule. Research and define the technical requirements and the business requirements. Receive approval on the user stories that will go into the development sprints.

DEVELOPMENT SPRINTS

Start development work to set up the system's infrastructure of the system and begin development on approved user stories. Short development cycles allow teams to develop, deploy, and iterate on their product with frequent feedback from stakeholders.

USER ACCEPTANCE TESTING (UAT)

In User Acceptance Testing, business stakeholders determine whether an application or feature fulfills its purpose. Because development is happening in cycles, testing happens more frequently to ensure that work is being completed towards the product's vision.

TRAINING

Hands-on sessions will be conducted to train the monitoring staff on the new Monitoring system prior to go-live. End users will be provided instruction resources in a variety of formats including documents, videos, and quick start guides.

DATA MIGRATION & GO LIVE

Data entry will be paused on ACME and historical data moved to the new Monitoring application. Once migrated, users will only need to use the new Monitoring application.

GUIDED TOUR

LIVE DEMO

We will now provide a live guided tour of the new release features that you will be looking at as part of your assignment for this UAT session.

Event Search: View a listing of all events and use the search and filter features to narrow down your list to find the event you are looking for.

Monitoring Event Page: Each event has a monitoring event page that highlights the event information, selected participants, instrument, files, findings, and letters associated with the event.

Create an Event: New events can be created by identifying the organization, event information, components associated with the event, and monitors associated with the event.
